Detailed Action

METHOD AND DEVICE FOR THE CLASSIFICATION AND REDIRECTION OF DATA PACKETS IN A HETEROGENEOUS NETWORK

Response to Remarks/Arguments

1. Applicant requests reconsideration and allowance of the present application, where Applicant's submission filed on 7/21/2008 has been entered.
2. Claims 1 – 45 are pending in the present application with amended claims 1, 7, 14, 22 and 28 and cancelled claims 6, 12, 13, 27, 30, and 44 – 45.
3. In view of Applicant's amendments to the objected claims filed on 7/21/2008, claims 1 – 5, 7 – 11, 14 – 26, 28 – 29, and 31 – 43 are in condition for allowance.

Allowable Subject Matter

1. After a further search and thorough examination of the present application and in view of the applicant's amendments to the objected claims filed on 7/21/2008, claims 1 – 5, 7 – 11, 14 – 26, 28 – 29, and 31 – 43 are allowable.

1. The following is a statement of reasons for the indication of allowable subject matter: The cited references taught a method of classifying data in a data classifier deployed in a network device where the data classifier receives data packets at one of the ports and extracts tags and a logical port identifier (ID) from the a portion. However, neither the cited references or the prior art teaches the limitation where the tags include one or more of a flow tag, a media access control destination address tag, a media access control source address tag, a priority tag and a balancer tag and determining a flow ID representative of a network service on the heterogeneous communications network associated with the data packet; the step of determining the flow ID including a flow tag lookup process, a media access control destination address lookup process, a media access control source address learning process and an output flow ID selection process; determining a priority ID; combining the flow ID and the priority ID to create a queue

Art Unit: 2616

ID, wherein the flow tag lookup process receives as inputs the flow tag and the logical port ID and provides as outputs a first output flow ID to the output flow ID selection process, a customer ID to both the media access control destination address lookup process and the media access control source address learning process and an input flow ID to the media access control source address learning process.
